Gdańsk, Poland. Open to remote.

TECHNOLOGIES

Proxmox Docker Linux
Windows Networking
Home Assistant Node-RED
Cloud Python React
PHP Git Unreal Engine 5

STRENGTHS

- I troubleshoot under time pressure, calmly and step by step.
- I think in systems: I see how one change ripples through the rest.
- I keep digging for a fix instead of passing the ticket along.
- I explain technical things in the language of the user.

CERTIFICATES

Chatfuel, chatbot development

AVAILABILITY

Gdańsk area or fully remote.

I reply within a day.

Portfolio, projects
and contact.

I learn IT by building things that actually run, not things that merely pass a grade.

LOOKING FOR

My first role in IT support / helpdesk

PROFILE

I am a final-year student at a technical high school specialising in cloud technologies. From the start I have treated school as an excuse to build working systems: my own server, home automation, web projects. I want to start in user support: I like the moment someone's problem simply disappears.

SKILLS

Servers & virtualisation Proxmox, virtual machines and Docker containers. I deploy, update and maintain services in my own home lab.

Networks & systems Network and service configuration, Linux and Windows administration, security basics.

Automation Home Assistant and Node-RED: scenarios, device integrations and alerts. Python scripts for repetitive work.

Web & frontend React, PHP and plain JavaScript. Portfolio, client area and web tools written and deployed on my own.

PERSONAL PROJECTS

Home server on Proxmox

HOME LAB

My own hypervisor running virtual machines and Dockerised services. Set up from scratch: networking, backups, updates and debugging when something refuses to boot.

Proxmox · Docker · Linux

Smart home

AUTOMATION

A system built on Home Assistant and Node-RED. Devices from different vendors tied into one logic: scenarios, sensors and alerts instead of five separate apps.

Home Assistant · Node-RED · MQTT

drqwerciak.pl

WEB

Portfolio written in framework-free PHP: two languages, light and dark mode, admin panel, blog, client area and a chat backed by a language model.

PHP · JavaScript · CSS

Unreal Engine 5 projects

GAMEDEV

Learning the engine after hours: gameplay logic, scene work and optimisation. A good lesson in what the hardware underneath is really doing.

Unreal Engine 5 · Blueprints

EDUCATION

Technical high school

Final year, IT programme with a cloud technologies specialisation. Gdańsk, Poland.

Self-taught

Documentation, hands-on labs at home and projects I actually finish instead of abandoning halfway.

HOW I HANDLE A TICKET

01	02	03	04
Listen, reproduce	Isolate the cause	Fix it	Write it up
